

POWER SCOUR WASHING INSTRUCTIONS

Power Scour	Fibre	Water
½ oz. (15ml)	1 LB. (0.45kg)	2 gal.(7.57L)
2 ½ oz. (74ml)	5 LBS. (2.29kg)	10 gal.(37.85L)
5 oz. (148ml)	10 LBS. (4.5kg)	20 gal.(75.7L)

Mix Power Scour into water. Submerge fibre and make sure it is completely covered and loosely fit. Wash for 15-20 minutes (do not allow water temp to drop significantly). Drain water and rinse once or twice with same temperature water. Depending on how dirty or greasy the fibre is, if a second wash is needed use ½ the amount of Power Scour in water and repeat with 1-2 more rinses.

Extra tips*

High Lanolin and dirt (Wool, Mohair)

140 degree F (or 60 degree C.) water temp.
May require 2 Washings/Soaks

Less Oily/Waxy fibres (Alpaca, Cashmere)

120 degree F. (or 49 degrees C.) water temp.

*For Harder Water, more water volume or really greasy/oily fibres add a bit more Power Scour.

*For clay soil deposits, dirty tips or exceptionally greasy fibre consider cool water pre-soak with Power Scour.

We recommend the use of **Unicorn Fibre Rinse** in the final rinse to help with the manageability of the fibre, softness and antistatic control. If dyeing, use Fibre Rinse **after** the dyeing process to help lock in color. The dosage of Fibre Rinse would be the same as the initial dosage of Power Scour above.

Unicorn Products are highly biodegradable and have a low BOD (Biochemical Oxygen Demand), earth friendly, and are concentrated products that contain no phosphates, enzymes, bleach or fillers.

Power Scour was designed and tested to achieve optimum cleaning with minimal fibre damage. A certain amount of trial and error should be expected during start-up to avoid over or under use of the products.
